

Sunrise Multi-Specialty Hospital

123, Health Avenue, Chennai, India

Comprehensive Diagnosis Report

Patient Name	Arvinth S.
Patient ID	SMH20250805001
Age / Gender	28 / Male
Date of Visit	05 August 2025
Doctor(s) Attended	Dr. R. Priya, MD (General Medicine); Dr. K. Manoj, DM (Cardiology)
Number of Visits	2
Last Visit Date	02 August 2025

Symptoms and Clinical Examination

The patient reported persistent fatigue for the past 3 weeks, occasional mild chest discomfort, shortness of breath during physical exertion, and increased thirst. No episodes of fainting or severe chest pain reported. No previous history of diabetes or hypertension. Family history positive for cardiovascular diseases (father) and type 2 diabetes mellitus (mother).

On examination, the following vitals were recorded:

Temperature	98.4 °F
Blood Pressure	138/88 mmHg
Pulse Rate	92 bpm
Respiratory Rate	18 breaths/min
SpO ₂	97% (room air)

Laboratory Investigations

Test	Result	Reference Range
Hemoglobin	12.5 g/dL	13.5 - 17.5 g/dL
WBC Count	9,200 /μL	4,000 - 11,000 /μL
Platelet Count	2.1 lakh/μL	1.5 - 4.5 lakh/μL
Blood Sugar (Fasting)	128 mg/dL	70 - 110 mg/dL
HbA1c	6.2%	< 5.7% (Normal)
Total Cholesterol	245 mg/dL	< 200 mg/dL
LDL Cholesterol	165 mg/dL	< 100 mg/dL
HDL Cholesterol	38 mg/dL	> 40 mg/dL
Triglycerides	220 mg/dL	< 150 mg/dL

ECG	Mild ST Elevation noted in Leads II, III, and aVF	Normal ST segment
-----	---	-------------------

Diagnosis

Based on the clinical findings and laboratory investigations, the following diagnoses were made:

- Stage 1 Hypertension
- Prediabetes with elevated fasting glucose and borderline HbA1c
- Dyslipidemia with elevated LDL and triglycerides, low HDL
- Early signs of cardiovascular risk (abnormal ECG findings)

Treatment Plan and Recommendations

- Amlodipine 5mg orally once daily in the morning after breakfast
- Metformin 500mg orally once daily before dinner
- Initiate lifestyle modifications: low-sodium, low-fat diet; increased physical activity
- Daily 30-minute moderate-intensity exercise (e.g., brisk walking)
- Repeat blood sugar and lipid profile after 6 weeks
- Cardiology referral advised for further cardiovascular evaluation

Next Follow-up Appointment: 20 August 2025

Dr. R. Priya, MD (General Medicine)
